

INSTALLATION INSTRUCTION

When the pitch against a sidewall
About flashing around a sidewall

Pay attention about fixing in the
last cutting raw of shingles.

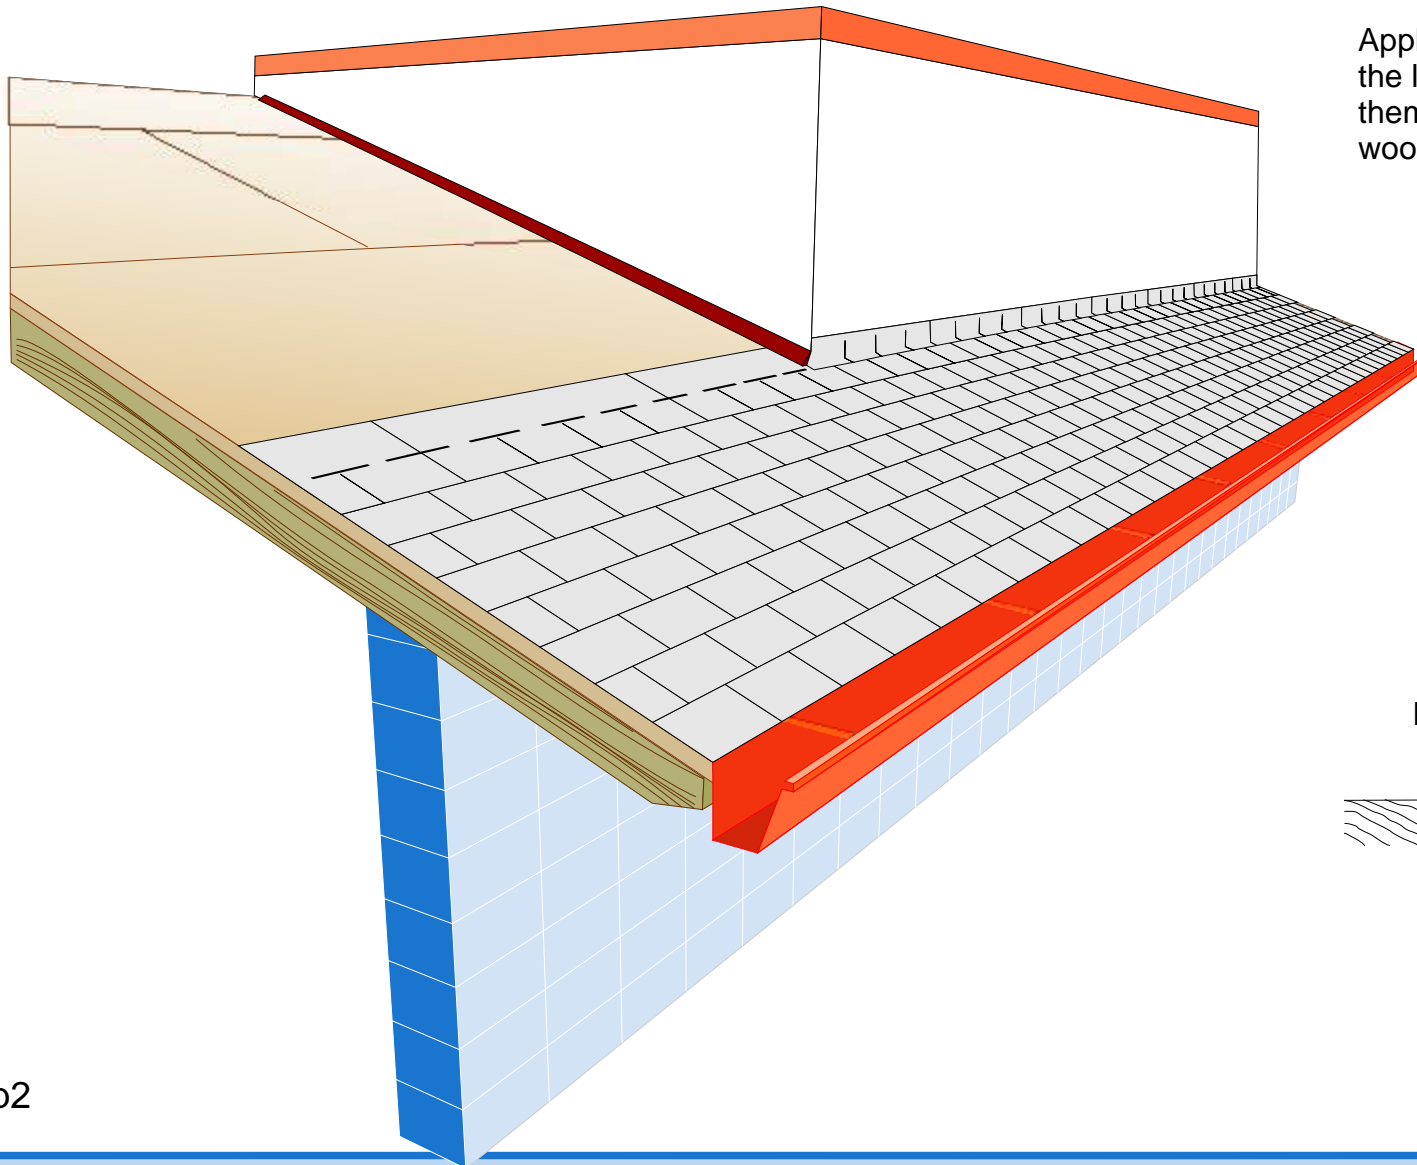

Installed the shingles and when you arrived against a sidewall, bent and fix them with high adherence nails also on the wall. Pay attention about the last cutting raw of shingles; if is necessary use bitustick.

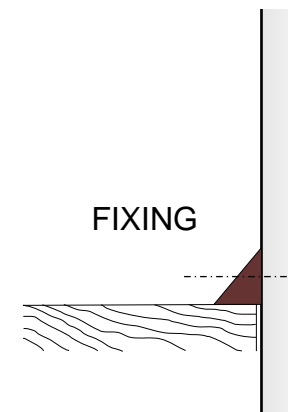

INSTALLATION INSTRUCTION

When the pitch against a sidewall
About flashing around a sidewall

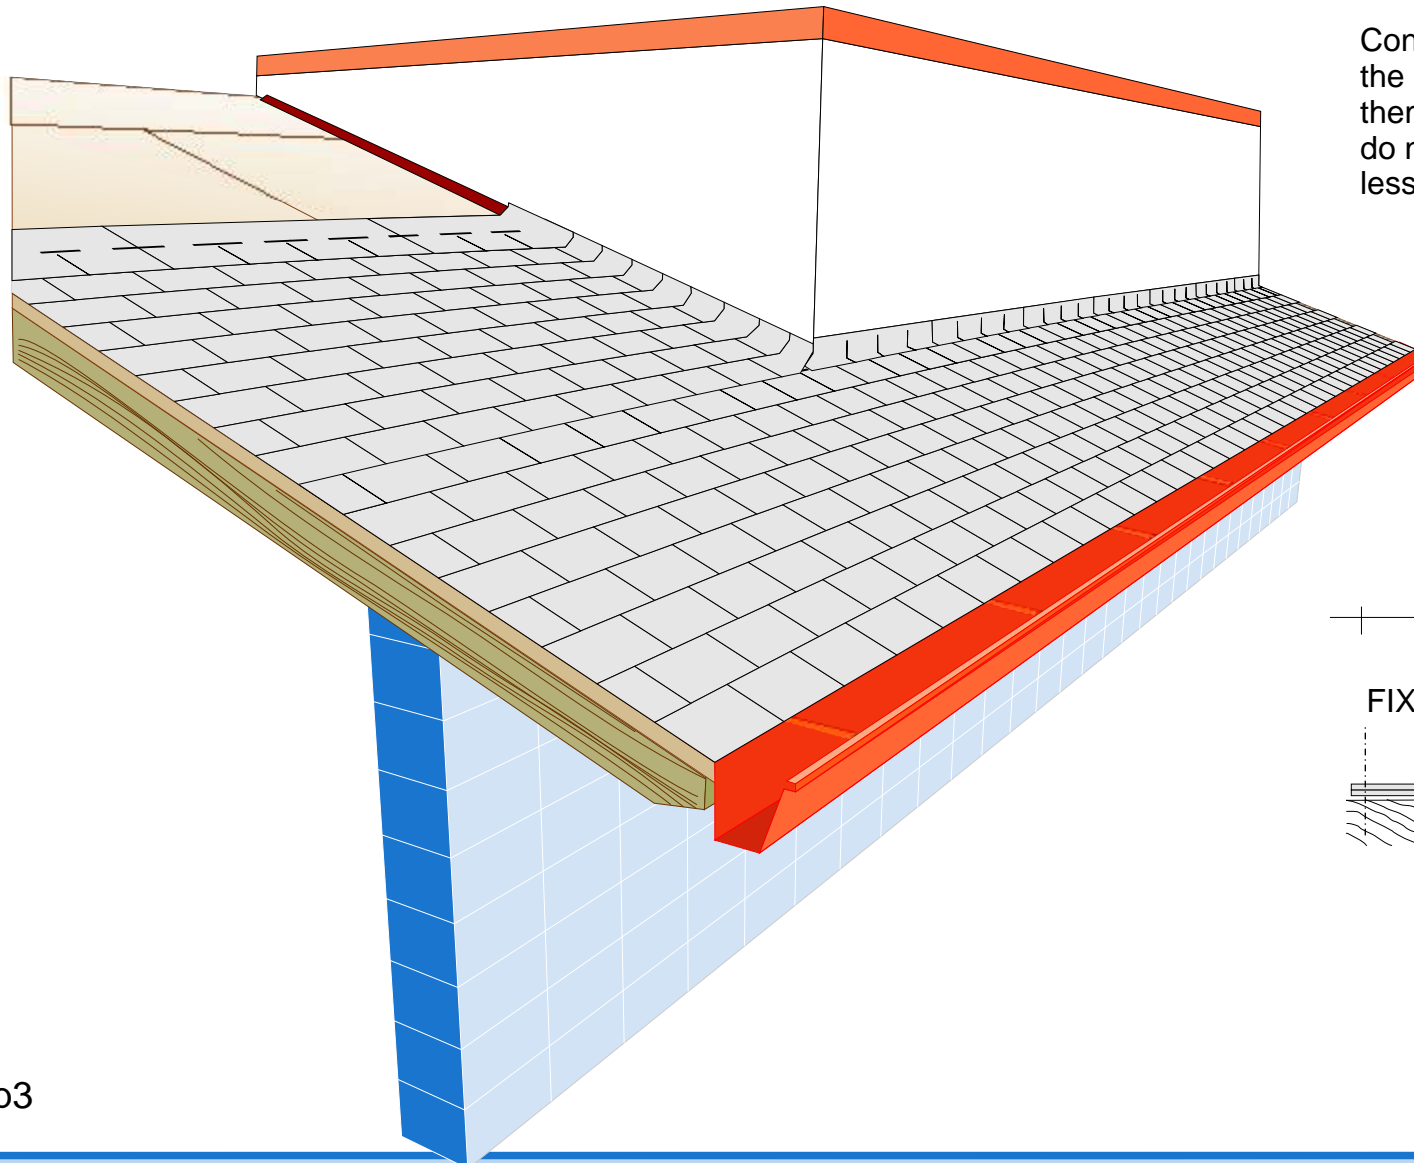

Apply a triangular battens along the lateral side of the wall and fix them with self-tapping screws for wood or screws anchor.

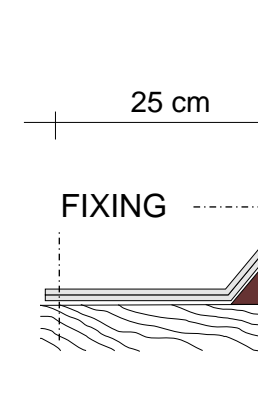

INSTALLATION INSTRUCTION

When the pitch against a sidewall
About flashing around a sidewall

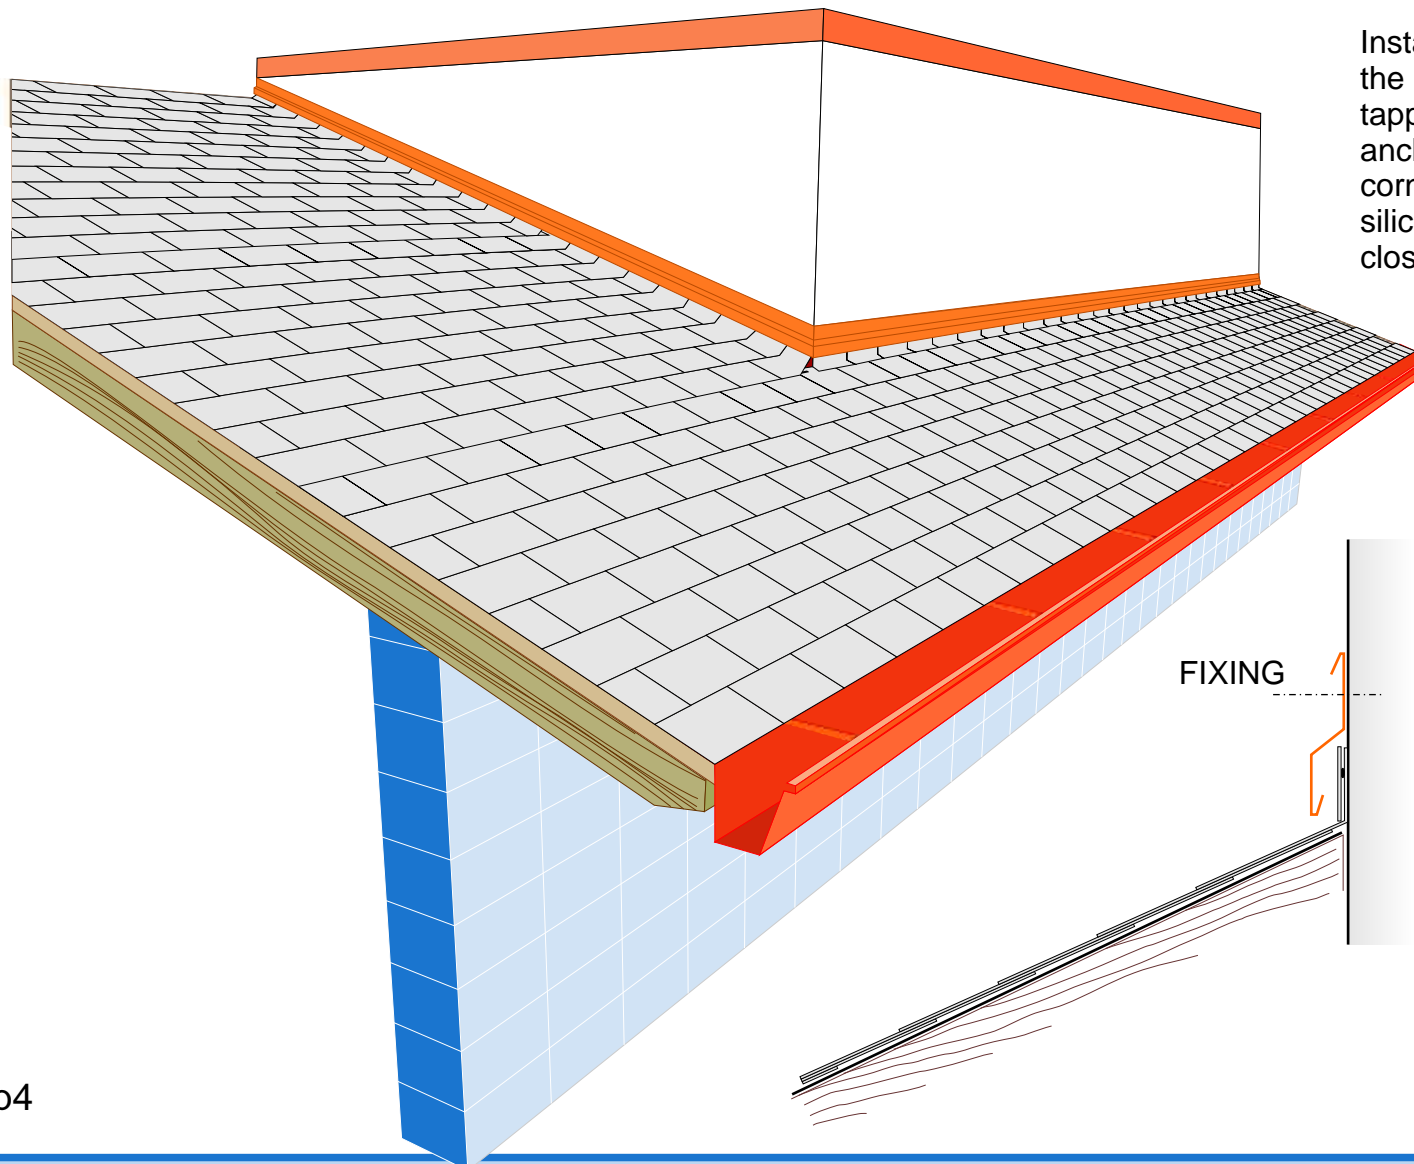

Continue to install the shingles on the pitch and at the corner bent them on wall and fix. On the pitch do not fix with nails at a distance less than at 25 cm from the edge.

INSTALLATION INSTRUCTION

When the pitch against a sidewall
About flashing around a sidewall

Install the wall metal profile as on the pictures and fix with self-tapping screws for wood or screws anchor. Pay attention on the corner, cut the flashing, bent it, use silicone to waterproof the joint and close the flashing with rivets.
